

Abdulwahab Abdullahi

Developer. Front end by hand, back end with AI help.

I learn whatever the problem asks of me.

Profile

I'm a developer from West Africa. I write my front end myself, in React, TypeScript and Tailwind. For back-end work like databases and APIs I use AI to go faster, and I read and test everything before it ships. I've built 13 projects since 2024. All of them are demos made to learn and to show my work, and none was for a paying client yet. I'm looking for my first real team. I also work as a tailor, and that's why StitchBook and AtelierFit exist: I built them for problems I see at the cutting table. Give me an unfamiliar problem and some time, and I'll learn it well enough to build for it.

Selected projects

Live demos are linked. Several use invented brands.

- 01

AtelierFit

DEMO

React · TypeScript · Supabase · PWA
- Phone app for ordering tailored clothes. It takes measurements from a camera (pose detection runs on the phone) or by hand, then handles a deposit with Paystack and order tracking. Installs like an app.
- 02
- StitchBook
- DEMO
- React · TypeScript · Express · Supabase
- Order book and fabric stock tracker for a tailor shop, as a web and desktop app. Visitors can open the manage tab and try it. Their changes undo themselves after 24 hours.
- 03
- AI Outreach
- PRIVATE TOOL
- TypeScript · Node.js · Supabase · Gemini
- Finds local businesses with weak websites, checks them and drafts emails in the business's own language, with an English copy. I read and send each one myself.
- 04
- Atelier Noir
- DEMO
- React · TypeScript · Tailwind · Supabase
- Menswear storefront with a catalogue, measurement bookings, a lookbook and an admin dashboard.
- 05
- Amāra Beauty Lounge
- DEMO
- React · TypeScript · Firebase
- Salon site in English and Arabic, with a booking calendar, Google sign-in and email alerts to the owner.
- Also built: Velocity Rentals (bilingual car rental, resumable booking flow), three hotel sites (Azure, H'orizon and a booking platform), Voltway Electrical (service site with a quote form), RedFine (grooming), Shin Orne (jewelry store) and PhoneFrame (iPhone mockup component).
- abdulwahab-portfolio-tau.vercel.app/projects has every live link.

Experience

- Independent Developer

2024 – Present

I build and ship websites and web apps on my own: React front ends, Supabase or Firebase back ends, deployed on Vercel. Everything so far is self-directed demo work, listed above.
- Shop Assistant / Technical Apprentice

Jan 2026 – Present

Dawah Refrigerator Shop, Cinkassé, Togo
Serve customers, sell, help with repairs, and do practical refrigeration work.
- Electrical Installation Apprentice

Sep 2024 – Jan 2026

T-Energy, Saki, Oyo State, Nigeria
Installations, conduit and CCTV work, plus customer questions and showroom help. Where I learned to find a fault step by step.

Education

- Self-taught web development

2024 – Present

Official docs, MDN, building projects
Working toward freeCodeCamp certifications. Also learning fashion design and machine embroidery on the job.
- ADS Comprehensive College, Saki

Completed 2024

Secondary School Certificate.
